WHO WE ARE TALKING TO
HOW TO TELL AND SELL
QUICK CHEAT SHEET

FROM
**SPACE AGE
MATERIAL**
TO REAL WORLD PURPOSE

In the early 1970s, most motorcycle helmets were handmade from fiberglass — heavy, inconsistent and built mainly for racers. Engineer Lander Nocchi believed protection could be made more intelligent.

His answer came from a material already proven beyond the road: Lexan™ polycarbonate, used by NASA for astronaut helmets since the 1960s.

In 1972, he founded Nolan from an anagram of his own name: NO-LAN. A personal signature became a manufacturing philosophy: intelligent protection, repeatable quality and real-world purpose — made for riders from the very beginning.

**NOCCHI
LANDER**

SOME
BRANDS
WRITE
THEIR
VALUES
ON
A
WALL

Our principles are not abstract values. They are built into the process — from development and testing to production and final assembly.

In every material choice. Every test. Every fit adjustment. Every detail most riders may never see — but can feel on the road.

**WE
WORK
THEM
IN**

[im'peŋno]
IMPEGNO

Shared responsibility — for the product, for each other, for the work itself.

[mae-STRI-a]
MAESTRIA

Expertise built through making, testing and refining. It's what turns knowledge into product.

[in'dʒeŋno]
INGEGNO

Practical intelligence that turns real rider needs into better solutions.

Our work is guided by these three principles that define how we design, engineer and execute. They are rooted in our Italian origins and visible in every helmet we make.

They give us a clear foundation, allowing us to evolve in different directions and keep us grounded while we move forward.

WE BUILD WHAT OTHERS SOURCE

Nolan's end-to-end manufacturing approach keeps critical knowledge close to the product. Shells, visors, EPS, testing, refinement and final assembly are brought together within one integrated process.

More demanding to manage. More powerful to control. It gives Nolan consistency, direct feedback and the freedom to adapt – improving products, responding to market needs and staying close to what riders expect.

LEXAN POLYCARBONATE

01
Polycarbonate granules are heated to approx. 300°C until liquefied.

02
The material is injected into the mould under high pressure – up to 1,000 bar.

03
The shell cools, hardens and is precisely finished.

FIBRE

01
Fibre mats are cut to shape – including fiberglass, Kevlar and carbon.

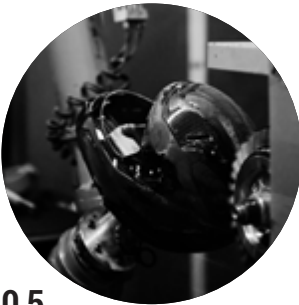

02
The material is placed into the mould by hand, layer by layer.

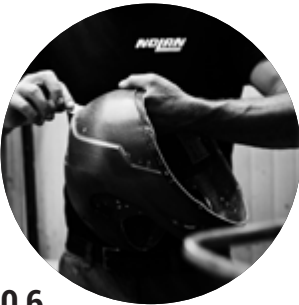

03
The shell is hardened under heat and pressure – around 180°C.

04
Openings are cut with high-pressure waterjet technology.

05
The shell is machine-sanded for precise surface preparation.

06
The final surface is shaped and refined by hand.

EXPLAINING THE DIFFERENCE

When dealers ask what makes Nolan different, integrated manufacturing gives you a clear answer: control, consistency and responsibility.

From shell to visor, from EPS to final testing, critical steps are closely connected. That helps Nolan understand the product more deeply, refine faster and stand behind what it sells.

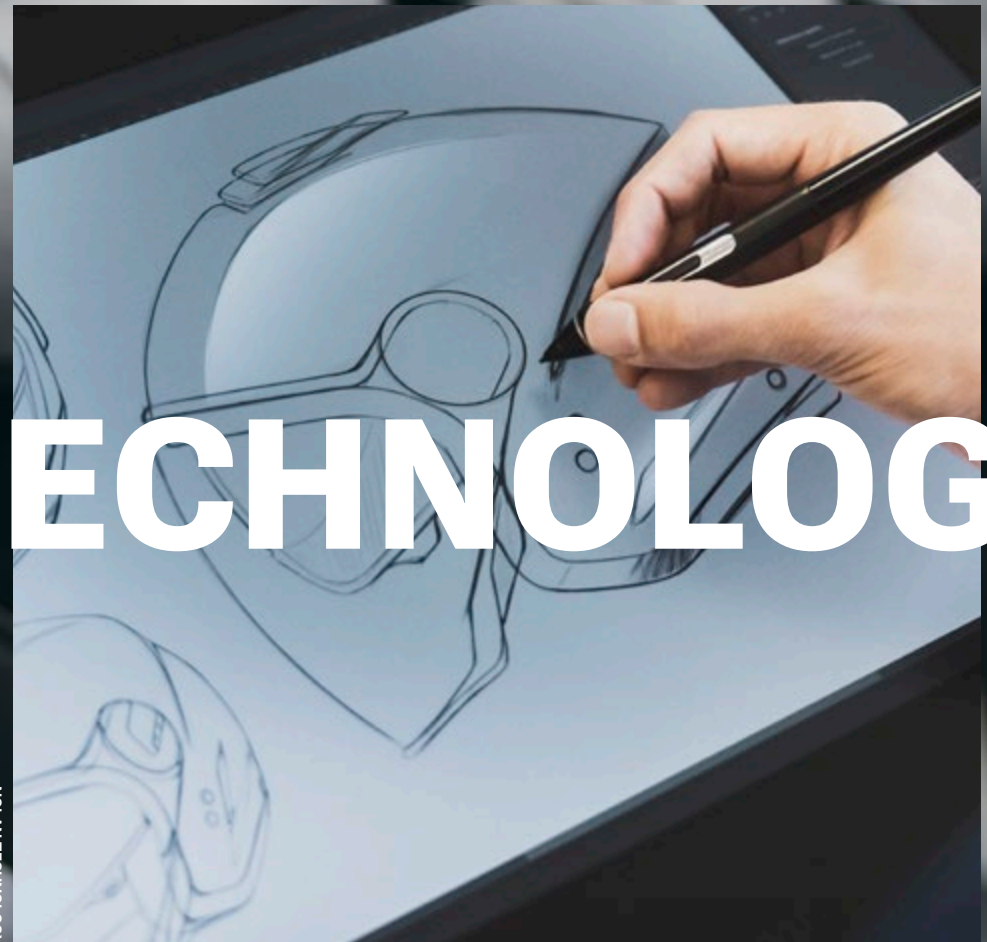

Real substance is not about claiming perfection. It is about knowing the product well enough to improve it where it matters.

THAT IS A
POWERFUL STORY
TO BRING INTO
EVERY
CONVERSATION

BECAUSE IN A
MARKET FULL OF
CLAIMS, REAL
SUBSTANCE
IS WHAT MAKES A
BRAND EASIER TO
TRUST

PROTECTION, COMFORT AND CONTROL
ENGINEERED INTO EVERY DETAIL

TECHNOLOGY

NOLAN TECHNOLOGY

2027

PERFORMANCE ENGINEERING

TECHNOLOGY

ELLIPTICAL CHIN GUARD ROTATION

MODELS FEATURING ELLIPTICAL
MECHANISM: N100-6/ X-1005 UC

Nolan's elliptical chin guard rotation keeps the open chin section closer to the helmet shell. This reduces the front profile in the open position and helps minimise the "sail effect" while maintaining a more balanced shape.

VORTEX CONTROL

MODELS FEATURING VORTEX CONTROL
VISORS: X-904 UC/ N20-2 VISOR

Diamond-shaped micro-geometries on the visor are designed to influence airflow at higher speeds. By generating controlled micro-vortices, they help guide the air more consistently along the helmet surface, reducing turbulence and wind noise.

RACETRACK AERODYNAMIC SPOILER RAS

X-804 RS
ENGINEERING

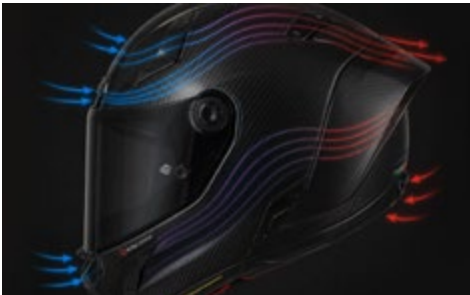

RAS stands for Racetrack Aerodynamic Spoiler. On racing-oriented helmets, the removable spoiler is designed to support aerodynamic stability at higher speeds.

RACING AIRFLOW RAF

X-804 RS
ENGINEERING

Nolan's racing ventilation concept, using multiple air intakes and a rear extractor to support airflow in demanding riding conditions. It is designed to help maintain comfort during high-performance use.

SAFETY VISOR LOCK SYSTEM SVLS

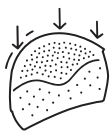

X-804 RS
ENGINEERING

SVLS helps reduce the risk of the visor opening at high speed. It is a performance-focused detail that supports stability and rider confidence during faster riding.

PROTECTION AND SAFETY

TECHNOLOGY

MULTI DENSITY EPS SHELLS

ALL MODELS FEATURE
MULTI DENSITY INNER SHELLS

Multi-density EPS is engineered to absorb impact energy under different conditions – including different temperatures, speeds and impact surfaces. By using specific EPS solutions per size, Nolan helps optimise the balance between fit, cushioning and protection.

NOLAN EMERGENCY RELEASE SYSTEM NERS

MODELS FEATURING NERS:
X-804 RS/ ST UC/ X904 UC/ N80-8

NERS allows trained emergency responders to remove the cheek pads before taking off the helmet. This helps reduce movement around the rider's head and neck in critical situations.

DUAL ACTION OPENING SYSTEM

MODELS FEATURING DUAL ACTION:
N90-3/ N100-6/ N120-1/ X-1005

Dual Action is Nolan's safety opening system for modular helmets. Its double-lever mechanism allows smooth, one-handed operation, while helping reduce the risk of accidental opening. The result is intuitive usability combined with added rider protection.

P/J HOMOLOGATION

MODELS FEAT. P/J HOMOLOGATION: N70-3 X/
N90-3/ N100-6/ N120-1/ X-1005 UC

All Nolan modular helmets are tested and certified both as full-face helmets "P" and open-face helmets "J". While not standard across all modular helmets on the market, this dual homologation ensures safe use in both configurations, giving riders true versatility without compromise.

MICROLOCK2 RETENTION SYSTEM

MODELS FEATURING MICROLOCK2: N80-8/
X-1005/ N120-1/ N100-6/ N90-3/ N70-3 X

Microlock2 is Nolan's refined micro-metric retention system, designed for quick and precise fastening. Compared to the earlier Microlock version, it offers finer adjustment steps and a more compact design, allowing a more accurate and comfortable fit – a secure closure with smooth, easy everyday use.

COMFORT AND FIT

TECHNOLOGY

AIRBOOSTER TECHNOLOGY

ALL MODELS
FEATURING AIRBOOSTER

AirBooster Technology is Nolan's ventilation system, featuring integrated channels within the EPS shell, that guide airflow through the helmet. Fresh air is directed from front and top intakes toward rear extractors, enabling targeted ventilation and efficient cooling.

EYEWEAR ADAPTIVE SYSTEM

ALL MODELS
FEATURING EYEWEAR ADAPTIVE

The Eyewear Adaptive System is designed to make space for glasses inside the helmet. It improves comfort for riders who wear eyewear by reducing pressure around the temples.

STEADY FIT CHEEKPADS

X-SERIES MODELS
FEATURING STEADY FIT

STEADY FIT cheek pads use 3D-shaped padding with 3 available thicknesses. This allows the cheek area to be adjusted more precisely, helping riders achieve a secure, even fit and consistent comfort over time.

LINER ADJUSTABLE FITTING LAF

MODELS FEATURING LAF
X-904 UC/ X-804 RS UC/X-804 ST UC

LAF allows selected top-cap padding to be customised with 3 thicknesses in 4 areas. This gives riders a more individual fit and helps improve comfort in performance-focused helmets.

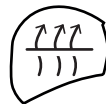

LINER POSITIONING CONTROL LPC

MODELS FEATURING LPC
X-1005/ N120-1/ N100-6/ N80-8

LPC allows the liner position to be adjusted in multiple settings. This helps riders fine-tune the helmet fit and achieve a more precise, comfortable position on the head.

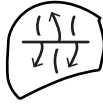

X-SERIES LINING

X-1005 UC/ X-904 UC
X-804 RS UC/ X-804 ST UC

TOP CAP: Open mesh construction maximizes airflow, while the LAF system allows precise fit adjustment with 4 removable padding foams in 3 thicknesses: 5 / 8 / 13 mm.

INNER COMFORT: Soft, durable polyamide fabric with carbon fibers supports breathability, thermoregulation, rapid moisture wicking and anti-static control.

CHEEK PADS: Anatomical cheek pads with removable, customizable padding in 3 sizes ensure even pressure and premium comfort. Sakura polyamide in the beard area improves comfort and wear resistance, while NERS allows safe emergency helmet removal.

N-SERIES LINING

N120-1/ N100-6/ N90-3/ N80-8/ N70-3X/
N60-6/ SPORT/ N40-6/ N20-2/ VISOR

TOP CAP: Mesh fabric improves airflow and temperature regulation. The LPC system fine-tunes the liner position for an individual, secure fit on N120-1, N100-6, N70-2X and N80-8.

INNER COMFORT: Premium Italian recycled polyamide offers a soft feel, excellent breathability, temperature management and lasting comfort.

CHEEK PADS: Soft, durable Italian polyester in the beard area provides comfort and wear resistance. Removable padding allows easy maintenance; NERS on N80-8 supports safe emergency helmet removal.

OPTICAL COMFORT

TECHNOLOGY

ULTRA WIDE VISOR

ALL MODELS FEATURE THE ULTRA WIDE VISOR

The Ultra Wide visor offers an extended field of vision for improved awareness and a more open riding experience. Made from high-quality polycarbonate, Nolan visors are produced in-house to ensure consistent clarity and durability.

VISION PROTECTION SYSTEM VPS

MODELS FEATURING VPS WITH RELEASE BUTTON: X-1005/ N120-1/ N100-6/ X-904/ N80-8

The integrated VPS sun visor offers adjustable sun protection with 4 or 5 positions and UV protection up to 400 nm. Made from pre-tinted polycarbonate, it ensures lasting colour and durability, with anti-fog and scratch-resistant treatments. Selected models include Nolan's patented automatic recall system for quick retraction.

VPS POSITION ADJUSTMENT

MODELS FEATURING: N20-2/ N20-2 VISOR

The VPS sun visor height can be adjusted in three positions to better match individual facial geometry. The setting is fixed once via a side lever, which can be positioned using a small tool such as a pen — allowing a more natural visor position and improved overall comfort.

PINLOCK

PINLOCK® FOG RESISTANCE INNER VISOR

ALL MODELS FEATURE PINLOCK® INNER VISOR

The Pinlock® inner visor creates a sealed air layer that helps prevent fog from forming on the visor. This supports clearer vision in changing weather, humidity and temperature conditions.

NOLAN x IRID® COLLAB

MODELS FEATURING: X-804 RS/ X-804 ST

Developed with IRID for the X-804 platform, this electronic photochromic visor reacts to light in under 0,09 seconds — without the need for a battery. It adapts instantly to changing conditions, helping maintain clear vision and visual comfort, supported by an advanced anti-fog treatment

POWERED BY

IRID

LC ELECTRONIC VISOR INSTANT PHOTOCHROMIC

IRID® visor is able to instantly and automatically adapt its tint to ambient light in less than 1 second. It guarantees the perfect light filter at all times, without batteries.

0.09 SECONDS

IRID® visors are able to adapt their tint to ambient light in 0.09 seconds, more than 120 times faster than a regular photochromic visor.

NO BATTERIES

Not even a small one. No battery means it is durable and light like a normal visor. You can use it 365 days a year H24 without any kind of maintenance.

INTEGRATED ANTI-FOG

Thanks to its anti-fog treatment, IRID® guarantees up to 120 seconds of fog resistance: the most performing anti-fog on the market.

100% WATERPROOF

Light is unpredictable, but so is the weather! IRID® visors are completely waterproof, so you can enjoy your ride, without worrying about anything.
